

MEETING-03

Date: 09-09-2026

Meeting Number: 03

Participants: Team Members

VENKATESHWARA U D

RAAIF ABDUL HAAMID

ZAINABA FIDA K N

YATHIKSHA U S

Agenda:

1. Implementation of stack, queue and data memory.
2. New instructions and required CPU updates.
3. Updating the Simulator UI and testing.

Discussion:

In this meeting, we discussed the implementation of stack, queue and data memory. For the queue, we discussed enqueue for adding elements, dequeue for deleting elements and peek for pointing to the front element, following the FIFO rule. For the stack, we discussed push, pop and peek, following the FILO rule. We also discussed data memory for storing the final accumulated data, the new instructions needed for this week, and the changes required in the CPU code and Simulator UI to support the new files and instructions.

Decisions:

1. Queue will use enqueue, dequeue and peek operations and follow FIFO.
2. Stack will use push, pop and peek operations and follow FILO.
3. Data memory will be used to store the required data / final accumulated data.
4. CPU, instruction set and Simulator UI will be updated for the new operations.
5. New instructions added: PUSH, POP, ENQUEUE and DEQUEUE.

Action Items:

VENKATESHWARA U D	Modify CPU and instruction set and test all files.
ZAINABA FIDA K N	Work on data memory and data memory testing.
YATHIKSHA U S	Work on queue implementation and queue testing.
RAAIF ABDUL HAAMID	Work on updating the Simulator UI.

Next Meeting: To be scheduled.
