

MEETING-02

Date: 28-08-2026

Meeting Number: 02

Participants: Team Members

VENKATESHWARA U D

RAAIF ABDUL HAAMID

ZAINABA FIDHA K N

YATHIKSHA U S

Agenda:

1. Finalize individual research topics (STC89C52 architecture, memory & stack, data structures, OS scheduling & context switching).
2. Review GitHub repo structure and confirm folders/files (docs, gitignore, README, src, programs, tests).

Discussion:

In this meeting, we reviewed the individual topics and discussed how each topic fits into the overall internal design of the STC89C52 simulator. The team looked at the main software parts such as the CPU, memory, peripherals, process management, scheduler and user interface. We also checked the GitHub repository structure and made sure that the required folders and files were available for organizing the project work. Each member confirmed their topic and the work to be completed under it.

Decisions:

1. Finalized the individual research topics and responsibilities for all four team members.
2. Agreed to follow the common simulator design where CPU, memory and peripherals are connected with process management, scheduling and the user interface.
3. Confirmed the GitHub repository structure and will use the agreed folders and files for project documentation, source code and testing.

Action Items:

VENKATESHWARA U D: Completed the study of STC89C52 architecture and CPU/instruction execution related work.

ZAINABA FIDHA K N: Completed the study of memory organization and stack mechanism.

YATHIKSHA U S: Completed the work on data structures and process management related concepts.

RAAIF ABDUL HAAMID: Completed the study of OS scheduling and context switching, with focus on UI and integration.

Next Meeting:

31st August 2026
